

Chapter 1. Chemistry and Measurements	pp 1 - 17
Chemistry	p 1
Classification of matter	p 2
Measurements and units	p 4
Significant figures	p 7
Dimensional analysis and conversion factors	p 8
Chapter 1 Homework:	p 11
Chapter 2. Atomic Theory	pp 18 - 36
Structure of the atom	p 18
The evolution of the modern atomic model	p 23
Periodic table of the elements	p 30
Mendeleev, Meyer, and the periodic table	p 32
Harry Moseley and atomic number	p 34
Chapter 2 Homework:	p 36
Chapter 3. Ions, Ionic Compounds, and Nomenclature	pp 37 - 49
Nomenclature of simple ions	p 38
Polyatomic ions	p 39
Hydrogen	p 40
Ionic compounds and their nomenclature	p 41
Chapter 3 Homework:	p 44
Chapter 4. Nonionic Compounds and Nomenclature	pp 50 - 55
Chapter 4 Homework:	p 53
Chapter 5. Electron Configuration, Lewis Dot Structure, and Molecular Shape	pp 56 - 77
Electron configuration	p 56
Lewis Dot Structures	p 59
VSEPR Theory	p 64
Bond polarity and molecular polarity	p 66
Chapter 5 Homework:	p 71
Chapter 6. Writing and Balancing Chemical Equations	pp 78 - 95
Decomposition reactions	p 78
Combination reactions	p 78
Single replacement reactions	p 78
Double replacement (metathesis) reactions	p 79
Precipitation reactions	p 79
Combustion reactions	p 80

Balanced chemical equations	p 81
Optional symbols	p 87
Chapter 6 Homework:	p 89
Chapter 7. Calculations with Chemical Formulas and Chemical Reactions.	p 96 - 132
Percentage composition by mass	p 98
Mass to moles, and moles to mass	p 99
Stoichiometry	p 100
Limiting reactant calculations	p 105
Theoretical yield	p 108
Chapter 7 Homework:	p 112
Chapter 8. Gases and Gas Laws	p 133 - 150
Boyle's law	p 134
Amontons' law	p 137
Charles' law	p 137
Kinetic molecular theory	p 138
Avogadro's law	p 139
Ideal Gas Law	p 140
Dalton's law of partial pressure	p 141
Vapor pressure	p 142
Chapter 8 Homework:	p 146
Chapter 9. Solutions and solution reactions	pp 151 - 175
Solubility of ionic compounds	p 155
Concentration	p 156
Molarity	p 159
Solution stoichiometry	p 160
Solubility mechanisms	p 162
Increasing dissolution rate	p 165
Chapter 9 Homework:	p 166
Chapter 10. Equilibrium	pp 176 - 187
Le Châtlier's Principle	p 177
General equilibria	p 178
Solubility product equilibria	p 179
Reversing the chemical reaction	p 179
Acid ionization constants	p 180
Conjugate acid-base pairs	p 180
Other factors affecting equilibrium	p 181
Chapter 10 Homework:	p 182

Chapter 11. Acids and Bases pp 188 - 206

Properties of acids and bases p 189

Water and pH p 191

Acid-Base Titrations p 194

Buffers p 197

Other general reactions p 200

Chapter 11 Homework: p 201

Chapter 12. Oxidation and Reduction pp 207 - 222

Oxidation-reduction (redox) reactions p 207

Rules for assigning oxidation numbers p 207

Identifying redox reactions p 208

Balancing redox reactions p 210

Chapter 12 Homework: p 214
